

Software Architecture Research Project

Assignment 2

Resources

Read the following articles: (the pdf files are attached)

“Architectural Blueprints – The 4+1 View Model of Software Architecture”
by Philippe Kruchten (IEEE Software,
Nov. 1995 issue).

“A classification and comparison framework
for software architecture description
languages” by Medvidovic, N., & Taylor, R. N.
IEEE Transactions on software
engineering, 2000).

Instructions

Summarize your analysis of each article and explain the major concepts in your own words.

- Do not extract phrases directly from the articles.
- Do not copy and paste any diagram/table from the articles (draw your own if you need to).

This is a teamwork project. Work with the same assigned teams.

Make sure that everyone studies the articles individually first, then discuss the major points you learned with your team and summarize your analysis in a report.

Submission

- Submit one pdf file of your summary and analysis
- Keep the submission file within 5 pages limit - excluding the cover page
- The 5-page limit is for both papers together (not 5 pages each!)

Rubric

Quality of the content
(including the most important
concepts): **70 points**

Clarity in writing/no grammar
and typing issues:
10 points

Formatting and style: **10 points**

Content flow and organization:
10 points
